Adding Contacts to ClientTouch

Last Modified on 11/01/2017 10:08 am CDT

You can add contacts to ClientTouch (for the currently logged in user) by sending the user to a special URL.

Use a pipe character "|" to separate the Contact IDs and put them in the AddContacts querystring parameter of **ClientTouch.aspx**

For example:

https://hyperdrivepro.morethanrewards.com/ClientTouch.aspx? AddContacts=123|124|125|126|127

Valid Contacts IDs for that user will be added to ClientTouch, then the user will be redirected to the ClientTouch Actions tab.

Things to consider

- User must be logged in to the system
- ClientTouch may not automatically cleared out, based on the configuration of your server
- There is a maximum length for URLs. It may limit this solution to a few hundred IDs.
